When calculating insurance premiums **insurance market participants** may compare your personal data against industry averages. Your **personal data** may also be used to create the industry averages going forwards. This is known as profiling and is used to ensure premiums reflect risk. Profiling may also be used by insurance market participants to assess information you provide to understand fraud patterns. Where special categories of personal data are relevant, such as medical history for life insurance or past motoring convictions for motor insurance, your special categories of personal data may also be used for profiling. Insurance market participants might make some decisions based on profiling and without staff intervention (known as automatic decision making).

Insurance market participants will provide details of any automated decision making they undertake without staff intervention in their information notices [and upon request] including:
